

**White paper drafted under the
European Markets in Crypto-
Assets Regulation (EU)
2023/1114 for FFG BPLSKNPD9**

Preamble

00. Table of Contents

Preamble	2
01. Date of notification	8
02. Statement in accordance with Article 6(3) of Regulation (EU) 2023/1114	8
03. Compliance statement in accordance with Article 6(6) of Regulation (EU) 2023/1114	8
04. Statement in accordance with Article 6(5), points (a), (b), (c), of Regulation (EU) 2023/1114	8
05. Statement in accordance with Article 6(5), point (d), of Regulation (EU) 2023/1114	8
06. Statement in accordance with Article 6(5), points (e) and (f), of Regulation (EU) 2023/1114	8
Summary	8
07. Warning in accordance with Article 6(7), second subparagraph, of Regulation (EU) 2023/1114	8
08. Characteristics of the crypto-asset	8
09. Information about the quality and quantity of goods or services to which the utility tokens give access and restrictions on the transferability	9
10. Key information about the offer to the public or admission to trading	9
Part A – Information about the offeror or the person seeking admission to trading	10
A.1 Name	10
A.2 Legal form	10
A.3 Registered address	10
A.4 Head office	10
A.5 Registration date	10
A.6 Legal entity identifier	10
A.7 Another identifier required pursuant to applicable national law	10
A.8 Contact telephone number	10
A.9 E-mail address	10
A.10 Response time (Days)	10
A.11 Parent company	10
A.12 Members of the management body	10
A.13 Business activity	11
A.14 Parent company business activity	11
A.15 Newly established	11
A.16 Financial condition for the past three years	11
A.17 Financial condition since registration	12

Part B – Information about the issuer, if different from the offeror or person seeking admission to trading	12
B.1 Issuer different from offeror or person seeking admission to trading	12
B.2 Name	12
B.3 Legal form	12
B.4 Registered address	12
B.5 Head office	13
B.6 Registration date	13
B.7 Legal entity identifier	13
B.8 Another identifier required pursuant to applicable national law	13
B.9 Parent company	13
B.10 Members of the management body	13
B.11 Business activity	13
B.12 Parent company business activity	13
Part C – Information about the operator of the trading platform in cases where it draws up the crypto-asset white paper and information about other persons drawing the crypto-asset white paper pursuant to Article 6(1), second subparagraph, of Regulation (EU) 2023/1114	13
C.1 Name	13
C.2 Legal form	13
C.3 Registered address	14
C.4 Head office	14
C.5 Registration date	14
C.6 Legal entity identifier	14
C.7 Another identifier required pursuant to applicable national law	14
C.8 Parent company	14
C.9 Reason for crypto-asset white paper preparation	14
C.10 Members of the management body	14
C.11 Operator business activity	14
C.12 Parent company business activity	14
C.13 Other persons drawing up the crypto-asset white paper according to Article 6(1), second subparagraph, of Regulation (EU) 2023/1114	14
C.14 Reason for drawing the white paper by persons referred to in Article 6(1), second subparagraph, of Regulation (EU) 2023/1114	14
Part D – Information about the crypto-asset project	14
D.1 Crypto-asset project name	14
D.2 Crypto-assets name	15
D.3 Abbreviation	15

D.4 Crypto-asset project description	15
D.5 Details of all natural or legal persons involved in the implementation of the crypto-asset project	15
D.6 Utility Token Classification	16
D.7 Key Features of Goods/Services for Utility Token Projects	16
D.8 Plans for the token	16
D.9 Resource allocation	18
D.10 Planned use of collected funds or crypto-assets	19
Part E – Information about the offer to the public of crypto-assets or their admission to trading	19
E.1 Public offering or admission to trading	19
E.2 Reasons for public offer or admission to trading	19
E.3 Fundraising target	19
E.4 Minimum subscription goals	19
E.5 Maximum subscription goals	19
E.6 Oversubscription acceptance	19
E.7 Oversubscription allocation	19
E.8 Issue price	19
E.9 Official currency or any other crypto-assets determining the issue price	19
E.10 Subscription fee	20
E.11 Offer price determination method	20
E.12 Total number of offered/traded crypto-assets	20
E.13 Targeted holders	20
E.14 Holder restrictions	20
E.15 Reimbursement notice	20
E.16 Refund mechanism	20
E.17 Refund timeline	20
E.18 Offer phases	20
E.19 Early purchase discount	20
E.20 Time-limited offer	20
E.21 Subscription period beginning	21
E.22 Subscription period end	21
E.23 Safeguarding arrangements for offered funds/crypto-assets	21
E.24 Payment methods for crypto-asset purchase	21
E.25 Value transfer methods for reimbursement	21
E.26 Right of withdrawal	21
E.27 Transfer of purchased crypto-assets	21

E.28 Transfer time schedule	21
E.29 Purchaser's technical requirements	21
E.30 Crypto-asset service provider (CASP) name	21
E.31 CASP identifier	21
E.32 Placement form	22
E.33 Trading platforms name	22
E.34 Trading platforms Market identifier code (MIC)	22
E.35 Trading platforms access	22
E.36 Involved costs	22
E.37 Offer expenses	22
E.38 Conflicts of interest	22
E.39 Applicable law	22
E.40 Competent court	23
Part F – Information about the crypto-assets	23
F.1 Crypto-asset type	23
F.2 Crypto-asset functionality	23
F.3 Planned application of functionalities	24
A description of the characteristics of the crypto asset, including the data necessary for classification of the crypto-asset white paper in the register referred to in Article 109 of Regulation (EU) 2023/1114, as specified in accordance with paragraph 8 of that Article	24
F.4 Type of crypto-asset white paper	24
F.5 The type of submission	25
F.6 Crypto-asset characteristics	25
F.7 Commercial name or trading name	25
F.8 Website of the issuer	25
F.9 Starting date of offer to the public or admission to trading	25
F.10 Publication date	25
F.11 Any other services provided by the issuer	25
F.12 Language or languages of the crypto-asset white paper	25
F.13 Digital token identifier code used to uniquely identify the crypto-asset or each of the several crypto assets to which the white paper relates	25
F.14 Functionally fungible group digital token identifier	25
F.15 Voluntary data flag	25
F.16 Personal data flag	26
F.17 LEI eligibility	26
F.18 Home Member State	26
F.19 Host Member States	26

Part G – Information on the rights and obligations attached to the crypto-assets	26
G.1 Purchaser rights and obligations	26
G.2 Exercise of rights and obligations	26
G.3 Conditions for modifications of rights and obligations	26
G.4 Future public offers	26
G.5 Issuer retained crypto-assets	27
G.6 Utility token classification	27
G.7 Key features of goods/services of utility tokens	27
G.8 Utility tokens redemption	27
G.9 Non-trading request	27
G.10 Crypto-assets purchase or sale modalities	28
G.11 Crypto-assets transfer restrictions	28
G.12 Supply adjustment protocols	28
G.13 Supply adjustment mechanisms	28
G.14 Token value protection schemes	28
G.15 Token value protection schemes description	28
G.16 Compensation schemes	28
G.17 Compensation schemes description	28
G.18 Applicable law	28
G.19 Competent court	28
Part H – information on the underlying technology	29
H.1 Distributed ledger technology (DLT)	29
H.2 Protocols and technical standards	29
H.3 Technology used	29
H.4 Consensus mechanism	30
H.5 Incentive mechanisms and applicable fees	30
H.6 Use of distributed ledger technology	30
H.7 DLT functionality description	30
H.8 Audit	31
H.9 Audit outcome	31
Part I – Information on risks	31
I.1 Offer-related risks	31
I.2 Issuer-related risks	33
I.3 Crypto-assets-related risks	34
I.4 Project implementation-related risks	36
I.5 Technology-related risks	36

I.6 Mitigation measures	38
Part J – Information on the sustainability indicators in relation to adverse impact on the climate and other environment-related adverse impacts	39
J.1 Adverse impacts on climate and other environment-related adverse impacts	39
S.1 Name	39
S.2 Relevant legal entity identifier	39
S.3 Name of the crypto-asset	39
S.4 Consensus Mechanism	39
S.5 Incentive Mechanisms and Applicable Fees	39
S.6 Beginning of the period to which the disclosure relates	40
S.7 End of the period to which the disclosure relates	40
S.8 Energy consumption	40
S.9 Energy consumption sources and methodologies	40
S.10 Renewable energy consumption	40
S.11 Energy intensity	40
S.12 Scope 1 DLT GHG emissions – Controlled	40
S.13 Scope 2 DLT GHG emissions – Purchased	40
S.14 GHG intensity	40
S.15 Key energy sources and methodologies	40
S.16 Key GHG sources and methodologies	41

01. Date of notification

This white paper was notified on 2026-08-13.

02. Statement in accordance with Article 6(3) of Regulation (EU) 2023/1114

This crypto-asset white paper has not been approved by any competent authority in any Member State of the European Union. The person seeking admission to trading of the crypto-asset is solely responsible for the content of this crypto-asset white paper.

03. Compliance statement in accordance with Article 6(6) of Regulation (EU) 2023/1114

This crypto-asset white paper complies with Title II of Regulation (EU) 2023/1114 of the European Parliament and of the Council and, to the best of the knowledge of the management body, the information presented in the crypto-asset white paper is fair, clear and not misleading and the crypto-asset white paper makes no omission likely to affect its import.

04. Statement in accordance with Article 6(5), points (a), (b), (c), of Regulation (EU) 2023/1114

The crypto-asset referred to in this crypto-asset white paper may lose its value in part or in full, may not always be transferable and may not be liquid.

05. Statement in accordance with Article 6(5), point (d), of Regulation (EU) 2023/1114

As defined in Article 3(9) of Regulation (EU) 2023/1114 of the European Parliament and of the Council of 31 May 2023 on Markets in Crypto-Assets – amending Regulations (EU) No 1093/2010 and (EU) No 1095/2010 and Directives 2013/36/EU and (EU) 2019/1937 – a utility token is “a type of crypto-asset that is only intended to provide access to a good or a service supplied by its issuer”. This crypto-asset does not qualify as a utility token, as its intended use goes beyond providing access to a good or service supplied solely by the issuer.

06. Statement in accordance with Article 6(5), points (e) and (f), of Regulation (EU) 2023/1114

The crypto-asset referred to in this white paper is not covered by the investor compensation schemes under Directive 97/9/EC of the European Parliament and of the Council or the deposit guarantee schemes under Directive 2014/49/EU of the European Parliament and of the Council.

Summary

07. Warning in accordance with Article 6(7), second subparagraph, of Regulation (EU) 2023/1114

Warning: This summary should be read as an introduction to the crypto-asset white paper. The prospective holder should base any decision to purchase this crypto-asset on the content of the crypto-asset white paper as a whole and not on the summary alone. The offer to the public of this crypto-asset does not constitute an offer or solicitation to purchase financial instruments and any such offer or solicitation can be made only by means of a prospectus or other offer documents pursuant to the applicable national law. This crypto-asset white paper does not constitute a prospectus as referred to in Regulation (EU) 2017/1129 of the European Parliament and of the Council or any other offer document pursuant to Union or national law.

08. Characteristics of the crypto-asset

The B3 crypto-asset referred to in this white paper is a crypto-asset other than EMTs and ARTs and is implemented on the Base network as a token under the ERC-20 token standard, according to the DTI FFG shown in section F.14, as of 2026-07-27. The maximum supply of the crypto-asset is 100,000,000,000 tokens. The first activity on Base can be viewed on 2025-01-28 (transaction hash: 0xdcde0e55e215088cca1778be4ff67370d0a6f333eb867f67ea6cead972e0c541, source: <https://basescan.org/tx/0xdcde0e55e215088cca1778be4ff67370d0a6f333eb867f67ea6cead972e0c541>, accessed 2026-07-27).

B3 is an ecosystem for games and consumer applications operating on public blockchain infrastructure. It is built on Base, a Layer-2 network that settles to Ethereum, and operates an additional network layer that settles to Base. The project also enables developers to deploy separate game-specific chains, referred to as "GameChains", which operate independently while remaining interoperable with the wider B3 ecosystem and sharing its liquidity.

The B3 crypto-asset may be used within the ecosystem's applications, including to acquire virtual items, early-access passes or exclusive content, and to interact with games and other applications deployed within the B3 ecosystem. It may also be locked or staked to access newly launched GameChains and receive rewards, and may be used to submit or vote on proposals concerning the operation and further development of the network. The availability and scope of these functionalities depend on the technical arrangements maintained by the project and may change over time.

The crypto-asset does not grant any legally enforceable or contractual rights or obligations to its holders or purchasers. Any functionalities accessible through the underlying technology are purely technical or operational in nature and do not confer rights comparable to ownership, profit participation, governance, or similar entitlements known from traditional financial instruments.

09. Information about the quality and quantity of goods or services to which the utility tokens give access and restrictions on the transferability

As defined in Article 3(9) of Regulation (EU) 2023/1114 of the European Parliament and of the Council of 31 May 2023 on Markets in Crypto-Assets – amending Regulations (EU) No 1093/2010 and (EU) No 1095/2010 and Directives 2013/36/EU and (EU) 2019/1937 – a utility token is “a type of crypto-asset that is only intended to provide access to a good or a service supplied by its issuer”. This crypto-asset does not qualify as a utility token, as its intended use goes beyond providing access to a good or a service supplied solely by the issuer.

10. Key information about the offer to the public or admission to trading

Crypto Risk Metrics GmbH is seeking admission to trading on the Payward Global Solutions LTD ("Kraken") platform in the European Union in accordance with Article 5 of Regulation (EU) 2023/1114 of the European Parliament and of the Council of 31 May 2023 on Markets in Crypto-Assets, and amending Regulations (EU) No 1093/2010 and (EU) No 1095/2010 and Directives 2013/36/EU and (EU) 2019/1937. The admission to trading is not accompanied by a public offer of the crypto-asset.

Part A – Information about the offeror or the person seeking admission to trading

A.1 Name

Crypto Risk Metrics GmbH is the person seeking admission to trading.

A.2 Legal form

The legal form of Crypto Risk Metrics GmbH is 2HBR, which corresponds to "Gesellschaft mit beschränkter Haftung".

A.3 Registered address

The registered address of Crypto Risk Metrics GmbH is Lange Reihe 73, 20099 Hamburg, Germany,
federal state Hamburg.

A.4 Head office

The head office is identical to the registered address.

A.5 Registration date

Crypto Risk Metrics GmbH was registered on 2018-12-03.

A.6 Legal entity identifier

The Legal Entity Identifier (LEI) of Crypto Risk Metrics GmbH is 39120077M9TG001FE242.

A.7 Another identifier required pursuant to applicable national law

The national identifier of Crypto Risk Metrics GmbH is HRB 154488.

A.8 Contact telephone number

+4915144974120

A.9 E-mail address

info@crypto-risk-metrics.com

A.10 Response time (Days)

Crypto Risk Metrics GmbH will respond to investor enquiries within 30 calendar days.

A.11 Parent company

Crypto Risk Metrics GmbH has no parent company.

A.12 Members of the management body

Identity	Function	Business Address
Tim Zölitz	Chairman	Lange Reihe 73, 20099 Hamburg, Germany

A.13 Business activity

Crypto Risk Metrics GmbH is a technical service provider that supports regulated entities in fulfilling their regulatory requirements. Among other services, Crypto Risk Metrics GmbH acts as a data provider for ESG data under Article 66(5). In light of the requirements set out in Articles 4(7), 5(4) and 66(3) of Regulation (EU) 2023/1114 of the European Parliament and of the Council of 31 May 2023 on Markets in Crypto-Assets, and amending Regulations (EU) No 1093/2010 and (EU) No 1095/2010 and Directives 2013/36/EU and (EU) 2019/1937, Crypto Risk Metrics GmbH aims to provide central services for crypto-asset white papers.

A.14 Parent company business activity

Crypto Risk Metrics GmbH does not have a parent company. Accordingly, no business activity of a parent company is to be reported in this section.

A.15 Newly established

Crypto Risk Metrics GmbH has been established since 2018-12-03 and is therefore not newly established (i.e. more than three years).

A.16 Financial condition for the past three years

Crypto Risk Metrics GmbH, founded in 2018 and based in Hamburg (HRB 154488), has undergone several strategic shifts in its business focus since incorporation. Due to these changes in business model and operational direction over time, the financial figures from earlier years are only comparable to a limited extent with the company's current commercial activities. The present business model – centred on regulatory technology and risk analytics in the context of the MiCA framework – has been developed progressively and can realistically be considered fully operational since approximately 2024.

The company's financial trajectory over the past three years reflects the transition from exploratory development towards market-ready product delivery. Profit or loss after tax for the last three financial years is as follows:

2024 (unaudited): loss of EUR 50,891.81

2023 (unaudited): loss of EUR 27,665.32

2022: profit of EUR 104,283.00

The profit in 2022 resulted primarily from legacy consulting activities, which were discontinued as part of the company's repositioning.

The losses in 2023 and 2024 resulted from strategic investments in the development of proprietary software infrastructure, regulatory frameworks, and compliance technology for the MiCA ecosystem. During those periods, no substantial commercial revenues were expected, as resources were directed towards preparing the platform for market entry in a regulated environment.

A fundamental repositioning of the company occurred in 2023 and especially in 2024, when the focus shifted towards providing risk management, regulatory reporting, and supervisory compliance solutions for financial institutions and crypto-asset service providers. This marked a material shift in business operations and monetisation strategy.

Based on preliminary unaudited management information for the financial year 2025, revenues are expected to have exceeded EUR 800,000, while preliminary net profit is expected to exceed EUR 100,000.

These figures are not audited and are not based on a finalised annual financial statement. Accordingly, they remain subject to finalisation and may differ from the figures ultimately reported in the annual financial statements.

With the regulatory environment now taking shape and the platform commercially validated, it is assumed that the effects of the strategic developments will continue to materialise in 2026. The company foresees further scalability of its technology and growing market demand for regulatory compliance tools in the European crypto-asset sector.

No public subsidies or governmental grants have been received to date; all operations have been financed through shareholder contributions and internally generated resources. Crypto Risk Metrics GmbH has never accepted any payments in tokens from projects it has worked with and – due to its internal Conflicts of Interest Policy – never will.

A.17 Financial condition since registration

Not applicable. The company has been established for more than three years and its financial condition over the past three years is provided in Part A.16 above.

Part B – Information about the issuer, if different from the offeror or person seeking admission to trading

B.1 Issuer different from offeror or person seeking admission to trading

Yes, the issuer is different from the person seeking admission to trading.

B.2 Name

Minerva Tech Foundation

B.3 Legal form

The legal form of Minerva Tech Foundation is UNCO, which corresponds to "Fundación de Interés Privado".

B.4 Registered address

The registered address of Minerva Tech Foundation is Oceania Business Plaza, 21st Floor, Tower 1000, Isaac Hanono Missri Street, Punta Pacifica, Panama City,

Panama,

PA

B.5 Head office

Could not be found.

Could not be found.

Could not be found.

B.6 Registration date

Minerva Tech Foundation was registered on 2024-04-23.

B.7 Legal entity identifier

Minerva Tech Foundation has not been assigned a Legal Entity Identifier (LEI).

B.8 Another identifier required pursuant to applicable national law

Panama RUC: 25056553

B.9 Parent company

Could not be found while drafting this white paper (2026-07-27).

B.10 Members of the management body

Name	Function	Business address
Diana Aidee Munoz Maclao de Camargo	Director	Oceania Business Plaza, 21st Floor, Tower 1000, Isaac Hanono Missri Street, Punta Pacifica, Panama City, Panama

B.11 Business activity

Could not be found while drafting this white paper (2026-07-27).

B.12 Parent company business activity

Could not be found while drafting this white paper (2026-07-27).

Part C – Information about the operator of the trading platform in cases where it draws up the crypto-asset white paper and information about other persons drawing the crypto-asset white paper pursuant to Article 6(1), second subparagraph, of Regulation (EU) 2023/1114

C.1 Name

Not applicable since Crypto Risk Metrics GmbH is not a trading platform.

C.2 Legal form

Not applicable since Crypto Risk Metrics GmbH is not a trading platform.

C.3 Registered address

Not applicable since Crypto Risk Metrics GmbH is not a trading platform.

C.4 Head office

Not applicable since Crypto Risk Metrics GmbH is not a trading platform.

C.5 Registration date

Not applicable since Crypto Risk Metrics GmbH is not a trading platform.

C.6 Legal entity identifier

Not applicable since Crypto Risk Metrics GmbH is not a trading platform.

C.7 Another identifier required pursuant to applicable national law

Not applicable since Crypto Risk Metrics GmbH is not a trading platform.

C.8 Parent company

Not applicable since Crypto Risk Metrics GmbH is not a trading platform.

C.9 Reason for crypto-asset white paper preparation

Not applicable since Crypto Risk Metrics GmbH is not a trading platform.

C.10 Members of the management body

Not applicable since Crypto Risk Metrics GmbH is not a trading platform.

C.11 Operator business activity

Not applicable since Crypto Risk Metrics GmbH is not a trading platform.

C.12 Parent company business activity

Not applicable since Crypto Risk Metrics GmbH is not a trading platform.

C.13 Other persons drawing up the crypto-asset white paper according to Article 6(1), second subparagraph, of Regulation (EU) 2023/1114

Not applicable since Crypto Risk Metrics GmbH is not a trading platform.

C.14 Reason for drawing the white paper by persons referred to in Article 6(1), second subparagraph, of Regulation (EU) 2023/1114

Not applicable since Crypto Risk Metrics GmbH is not a trading platform.

Part D – Information about the crypto-asset project

D.1 Crypto-asset project name

Long Name: "B3", Short Name: "B3" according to the Digital Token Identifier Foundation (www.dtif.org, DTI see F.13, FFG DTI see F.14 as of 2026-07-27).

D.2 Crypto-assets name

Long Name: "B3" according to the Digital Token Identifier Foundation (www.dtif.org, DTI see F.13, FFG DTI see F.14 as of 2026-07-27).

D.3 Abbreviation

Short Name: "B3" according to the Digital Token Identifier Foundation (www.dtif.org, DTI see F.13, FFG DTI see F.14 as of 2026-07-27).

D.4 Crypto-asset project description

According to publicly available project documentation (sources: <https://docs.b3.fun>, <https://docs.b3.fun/protocol/scaling>, <https://docs.b3.fun/protocol/network-setup>, <https://b3os.org>, <https://docs.basement.fun>, <https://p1f.org>, accessed 2026-07-27), B3 is a blockchain infrastructure and software ecosystem for developing and operating applications on public blockchains. The project originated with a focus on blockchain-based games and operates B3 Mainnet, a separate network which settles to Base.

Developers may deploy applications on B3 Mainnet or create purpose-built application chains with their own execution environments. The project is intended to connect these chains through shared accounts, technical tools, cross-chain routing and access to liquidity. This structure is designed to prevent applications from competing for the same network capacity and to support lower transaction costs and higher transaction throughput.

The project's current public materials describe a broader product ecosystem centred on B3OS, a workflow platform for connecting wallets, smart contracts and external software systems so that blockchain-based actions can be triggered and automated. The ecosystem also includes consumer-facing applications developed by the project, including the Basement gaming platform, together with related software development and investment activities.

The B3 token is associated with this ecosystem through staking, participation in protocol governance and intended use within applications. The products, networks and services forming the wider B3 ecosystem are distinct from the crypto-asset itself and do not provide token holders with ownership or economic rights in the businesses that develop or operate them.

D.5 Details of all natural or legal persons involved in the implementation of the crypto-asset project

Name of person	Type of person	Business address of person	Domicile of company
Daryl Xu	Other person involved in implementation	Incorporating Services, Ltd., 3500 S Dupont Hwy, Dover, DE, US 19901	United States
Viktoriya Hying	Other person involved in implementation	Incorporating Services, Ltd., 3500 S Dupont Hwy, Dover, DE, US 19901	United States

Name of person	Type of person	Business address of person	Domicile of company
Sean Geng	Other person involved in implementation	Incorporating Services, Ltd., 3500 S Dupont Hwy, Dover, DE, US 19901	United States
Player1 Foundation	Other person involved in implementation	3119 9 Forum Lane, Camana Bay, Grand Cayman, KY1-9006, Cayman Islands	Cayman Islands
Minerva Tech Foundation	Other person involved in implementation	Oceania Business Plaza, 21st Floor, Tower 1000, Isaac Hanono Missri Street, Punta Pacifica, Panama City, Panama	Panama
Diana Aidee Munoz Maclao de Camargo	Other person involved in implementation	Oceania Business Plaza, 21st Floor, Tower 1000, Isaac Hanono Missri Street, Punta Pacifica, Panama City, Panama	Panama
Minerva Operations Ltd	Other person involved in implementation	CCP Financial Consultants Limited, 2nd Floor, Ellen L. Skelton Building, Fishers Lane, Road Town, Tortola, British Virgin Islands	British Virgin Islands
NPC Labs, Inc.	Other person involved in implementation	Incorporating Services, Ltd., 3500 S Dupont Hwy, Dover, DE, US 19901	United States

D.6 Utility Token Classification

As defined in Article 3(9) of Regulation (EU) 2023/1114 of the European Parliament and of the Council of 31 May 2023 on Markets in Crypto-Assets – amending Regulations (EU) No 1093/2010 and (EU) No 1095/2010 and Directives 2013/36/EU and (EU) 2019/1937 – a utility token is “a type of crypto-asset that is only intended to provide access to a good or a service supplied by its issuer”. This crypto-asset does not qualify as a utility token, as its intended use goes beyond providing access to a good or a service supplied solely by the issuer.

D.7 Key Features of Goods/Services for Utility Token Projects

As defined in Article 3(9) of Regulation (EU) 2023/1114 of the European Parliament and of the Council of 31 May 2023 on Markets in Crypto-Assets – amending Regulations (EU) No 1093/2010 and (EU) No 1095/2010 and Directives 2013/36/EU and (EU) 2019/1937 – a utility token is “a type of crypto-asset that is only intended to provide access to a good or a service supplied by its issuer”. This crypto-asset does not qualify as a utility token, as its intended use goes beyond providing access to a good or a service supplied solely by the issuer.

D.8 Plans for the token

This section provides an overview of the historical developments related to the B3 crypto-asset and a description of planned or anticipated project milestones as publicly communicated. All forward-looking elements are subject to significant uncertainty. They do not constitute commitments, assurances or guarantees, and may be modified, delayed or discontinued at any time.

The milestones set out below have been compiled from publicly available information and from data recorded on the Base network (sources: <https://docs.b3.fun>, <https://docs.b3.fun/protocol/constitution>, <https://docs.basement.fun>, <https://b3os.org>, <https://basescan.org/token/0xb3b32f9f8827d4634fe7d973fa1034ec9fddb3b3>, accessed 2026-07-27).

Past milestones:

- B3 mainnet and Basement.fun launch (2024-08): the B3 network entered public operation, together with Basement.fun, the platform through which games deployed on the network can be discovered and played.
- Creation of the B3 token (2025-01-28): the crypto-asset was created on the Base network and the whole of its supply of 100,000,000,000 tokens was produced in a single transaction.
- Initial distribution of the B3 token (2025-02): the crypto-asset was distributed to eligible recipients through a claim process operated by the project.
- Launch of B3 staking (2025-02): the contract through which holders stake the crypto-asset was deployed on the Base network, enabling staking rewards and access to associated reward games.
- Establishment of the B3 DAO governance framework (2025-02): a constitution and by-laws were published and governance contracts were deployed on the Base network, providing for holders to submit and vote on proposals.
- Announcement of the first external GameChain (2025-09): the project announced a game-specific chain to be operated on the XRP Ledger EVM sidechain rather than on the B3 network, in a test configuration.
- Public beta of B3OS (2026-04): a public test release was announced of B3OS, a workflow automation product permitting transactions on public blockchains to be initiated from other software systems.

Future milestones:

- Production launch of the XRPL GameChain (no date published): the XRPL GameChain has operated in a testnet configuration since its announcement in September 2025. No production launch date has been published and no further public announcements concerning the chain were identified as at 2026-07-27.

- Staking exposure to future ecosystem chains (no date published): the project has stated an intention that holders staking the crypto-asset will receive exposure to further chains deployed within the ecosystem. No mechanism, allocation or date has been published, and this should be treated as an intention only.

Note: All future milestones are subject to significant uncertainty, including but not limited to technical feasibility, regulatory developments, market adoption and community governance decisions. The project may modify, delay or discontinue any of these initiatives at any time. Past implementation or performance outcomes do not constitute an indication of future results, and any such changes may materially affect the characteristics, availability or perceived value of the B3 crypto-asset for its holders.

D.9 Resource allocation

Based on information from various third-party and industry sources, it is reported that the crypto-asset project associated with the B3 token has conducted multiple funding rounds involving pre-seed and seed private financing through NPC Labs, Inc., together with separate private financing through Minerva Operations Ltd.

According to publicly referenced information, NPC Labs, Inc., which carries out principal development work for B3, raised approximately USD 3,000,000 in pre-seed financing and USD 18,000,000 in a seed round announced on 2024-07-22. The seed round was led by Pantera Capital, with reported participation from Makers Fund, Hashed, Collab+Currency, Sfermion, Mirana Ventures, Bitscale Capital and Mantle EcoFund. The resulting publicly reported total was approximately USD 21,000,000.

Further public reporting indicates that Minerva Operations Ltd raised USD 372,000 through separate private financing commencing on 2024-09-26. The relevant public record describes the instruments as investment contracts but does not identify them as B3 tokens. No public token sale with disclosed proceeds and no separate fundraising by Minerva Tech Foundation as issuer were identified in the sources reviewed.

The financing raised by NPC Labs, Inc. was reportedly intended to support technical development, recruitment and expansion of the B3 project. No detailed budget, expenditure report or current balance has been published, and it cannot be determined whether any of the reported funds were transferred to the issuer, Player1 Foundation or another associated entity. Accordingly, no reliable aggregate figure can be stated for the financial resources currently available to the project as a whole.

However, all such information is derived exclusively from public announcements, portfolio disclosures, press releases, transparency reports, and third-party publications. The issuer, foundation, or entities associated with the B3 crypto-asset have not independently confirmed the occurrence, precise amounts, valuation, legal structure, or contractual terms of these reported financing rounds. As a result, the referenced investment amounts, investor participation, and any implied cumulative funding figures cannot be independently verified and should be considered indicative only.

D.10 Planned use of collected funds or crypto-assets

Not applicable, as this white paper serves the purpose of admission to trading and is not associated with any fundraising activity for the crypto-asset project.

Part E – Information about the offer to the public of crypto-assets or their admission to trading

E.1 Public offering or admission to trading

Crypto Risk Metrics GmbH is the person seeking admission to trading.

E.2 Reasons for public offer or admission to trading

The purpose of seeking admission to trading is to enable the crypto-asset to be listed on a regulated platform in accordance with the applicable provisions of Regulation (EU) 2023/1114 and Commission Implementing Regulation (EU) 2024/2984. The white paper has been drawn up to comply with the transparency requirements applicable to trading venues.

E.3 Fundraising target

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.4 Minimum subscription goals

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.5 Maximum subscription goals

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.6 Oversubscription acceptance

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.7 Oversubscription allocation

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.8 Issue price

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.9 Official currency or any other crypto-assets determining the issue price

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.10 Subscription fee

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.11 Offer price determination method

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.12 Total number of offered/traded crypto-assets

The maximum supply of the crypto-asset is set at 100,000,000,000 units. Investors should note that changes in the effective supply, including increases in circulating units or reductions through burning, may affect the token's price and liquidity.

E.13 Targeted holders

The admission of the crypto-asset to trading is open to all types of investors.

E.14 Holder restrictions

Holder restrictions are subject to the rules applicable to the crypto-asset service provider, as well as any additional restrictions that provider may impose.

E.15 Reimbursement notice

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.16 Refund mechanism

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.17 Refund timeline

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.18 Offer phases

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.19 Early purchase discount

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.20 Time-limited offer

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.21 Subscription period beginning

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.22 Subscription period end

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.23 Safeguarding arrangements for offered funds/crypto-assets

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.24 Payment methods for crypto-asset purchase

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.25 Value transfer methods for reimbursement

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.26 Right of withdrawal

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.27 Transfer of purchased crypto-assets

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.28 Transfer time schedule

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.29 Purchaser's technical requirements

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.30 Crypto-asset service provider (CASP) name

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.31 CASP identifier

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.32 Placement form

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.33 Trading platforms name

The admission to trading is sought on Payward Global Solutions LTD ("Kraken").

E.34 Trading platforms Market identifier code (MIC)

The Market Identifier Code (MIC) of Payward Global Solutions LTD ("Kraken") is PGSL.

E.35 Trading platforms access

The token is intended to be listed on the trading platform operated by Payward Global Solutions LTD ("Kraken"). Access to this platform depends on regional availability and user eligibility under Kraken's terms and conditions. Investors should consult Kraken's official documentation to determine whether they meet the requirements for account creation and token trading.

E.36 Involved costs

The costs involved in accessing the trading platform depend on the specific fee structure and terms of the respective crypto-asset service provider. These may include trading fees, deposit or withdrawal charges, and network-related transaction fees. Investors are advised to consult the applicable fee schedule of the chosen platform before engaging in trading activities.

E.37 Offer expenses

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.38 Conflicts of interest

MiCA-compliant crypto-asset service providers shall have strong measures in place in order to manage conflicts of interest. Due to the broad audience this white paper addresses, potential investors should always check the conflicts-of-interest policy of their respective counterparty.

Crypto Risk Metrics GmbH has established, implemented, and documented comprehensive internal policies and procedures for the identification, prevention, management, and documentation of conflicts of interest in accordance with applicable regulatory requirements. These internal measures are actively applied within the organisation. For the purposes of this specific assessment and the crypto-asset covered by this white paper, a token-specific review has been conducted by Crypto Risk Metrics GmbH. Based on this individual review, no conflicts of interest relevant to this crypto-asset have been identified at the time of preparation of this white paper.

E.39 Applicable law

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

E.40 Competent court

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

Part F – Information about the crypto-assets

F.1 Crypto-asset type

The crypto-asset described in the white paper is classified as a crypto-asset under the Markets in Crypto-Assets Regulation (MiCA) but is neither classified as an electronic money token (EMT) nor an asset-referenced token (ART). It is a digital representation of value that can be stored and transferred using distributed ledger technology (DLT) or similar technology, without embodying or conferring any rights to its holder. The crypto-asset does not aim to maintain a stable value by referencing an official currency, a basket of assets, or any other underlying rights. Instead, its valuation is entirely market-driven, based on supply and demand dynamics, and it is not subject to any stabilisation mechanism. It is neither pegged to any fiat currency nor backed by any external assets, which distinguishes it from EMTs and ARTs. Furthermore, the crypto-asset is not categorised as a financial instrument, deposit, insurance product, pension product, or any other regulated financial product under EU law. It does not grant financial rights, corporate voting rights, or any contractual claims to its holders, and therefore remains outside the scope of regulatory frameworks applicable to traditional financial instruments.

F.2 Crypto-asset functionality

According to publicly available project documentation and on-chain information (sources: <https://docs.b3.fun/protocol/b3-token>, <https://docs.b3.fun/protocol/tokenomics>, <https://docs.b3.fun/protocol/staking-b3>, <https://docs.b3.fun/protocol/constitution>, <https://docs.b3.fun/protocol/network-setup>, <https://explorer.b3.fun>, <https://basescan.org/token/0xb3b32f9f8827d4634fe7d973fa1034ec9fddb3b3>, accessed 2026-07-27), the B3 token is issued on Base and is intended to support staking, participation in protocol governance and the acquisition of goods, services or access within applications associated with the B3 ecosystem.

The project also operates B3 Mainnet, a separate Layer-3 network which settles to Base and uses ether as its transaction-fee asset. This network should not be confused with the network of issuance of the B3 token covered by this white paper. Although a technically related token contract exists on B3 Mainnet, no material supply or use of that deployment was identified. The issued supply of 100,000,000,000 B3 tokens exists on Base.

Staking is the clearest functionality currently available to holders and is provided through a facility operated for the project. Public materials describe staking as providing access to rewards and other project activities. The token also provides voting weight in the B3 protocol governance process. A proposer must control at least 30,000,000 delegated tokens, and the entire issued supply is treated as votable. No proposal or vote was identified in the public governance channels reviewed as at 2026-07-27. In addition, a five-member Security Council may approve routine upgrades and parameter changes with three approvals and emergency actions with four approvals, without first obtaining a token-holder vote. Token-holder governance is therefore available in principle but had not been exercised in practice. It does not provide corporate governance rights over the issuer or another legal entity. The project states that B3 tokens may be used to purchase items within

applications or that holding specified amounts may unlock access without the tokens being spent. Public project materials identify applications described as involving B3, including HypeDuel, which was presented on the B3 Explorer as permitting users to wager B3 tokens; however, the specific operational arrangements, including whether B3 is used directly or through application-specific credits, and the availability of those functions as at 27 July 2026, have not been independently verified. These functions should therefore be regarded as project-described functionalities rather than independently established token-denominated purchase functions.

The B3 token does not confer ownership, profit participation, revenue or fee-sharing rights, redemption, repayment, governance rights over the issuer or any related entity, or any contractual economic entitlement, including an entitlement to yield. Its governance functionality relates exclusively to the B3 protocol. Where public statements refer to revenue or value flowing to B3 token holders, no published allocation formula, distribution mechanism or contractual entitlement giving effect to such a flow has been identified. The token's functions are technical in nature and depend on continued project development, system stability, the availability of participating applications, governance decisions and the operational conditions of Base and B3 Mainnet, which are outside the control of individual holders. No automatic supply-adjustment mechanism or scheduled additional issuance is described.

F.3 Planned application of functionalities

Future milestones:

- Production launch of the XRPL GameChain (no date published): the XRPL GameChain has operated in a testnet configuration since its announcement in September 2025. No production launch date has been published and no further public announcements concerning the chain were identified as at 2026-07-27.

- Staking exposure to future ecosystem chains (no date published): the project has stated an intention that holders staking the crypto-asset will receive exposure to further chains deployed within the ecosystem. No mechanism, allocation or date has been published, and this should be treated as an intention only.

Note: All future milestones are subject to significant uncertainty, including but not limited to technical feasibility, regulatory developments, market adoption and community governance decisions. The project may modify, delay or discontinue any of these initiatives at any time. Past implementation or performance outcomes do not constitute an indication of future results, and any such changes may materially affect the characteristics, availability or perceived value of the B3 crypto-asset for its holders.

A description of the characteristics of the crypto asset, including the data necessary for classification of the crypto-asset white paper in the register referred to in Article 109 of Regulation (EU) 2023/1114, as specified in accordance with paragraph 8 of that Article

F.4 Type of crypto-asset white paper

The white paper type is "Other crypto-assets" (i.e. OTHR).

F.5 The type of submission

The type of submission is MODI (Modified white paper).

F.6 Crypto-asset characteristics

The crypto-asset referred to herein is a crypto-asset other than EMTs and ARTs, and is available on the Base network. The crypto-asset is fungible up to 18 digits after the decimal point. The crypto-asset does not confer ownership, profit-participation, corporate governance or other legally enforceable rights against the issuer or any other legal entity; protocol-level governance functionality may be available and is technical and operational in nature. Any functionalities associated with the token are limited to potential technical features within the relevant platform environment. These functionalities do not represent contractual entitlements and may depend on future development decisions, technical design choices, and operational conditions. The crypto-asset does not embody intrinsic economic value; instead, its value, if any, is determined exclusively by market dynamics such as supply, demand, and liquidity in secondary markets.

F.7 Commercial name or trading name

Long Name: "B3" according to the Digital Token Identifier Foundation (www.dtif.org, DTI see F.13, FFG DTI see F.14 as of 2026-07-27).

F.8 Website of the issuer

<https://b3.fun>

F.9 Starting date of offer to the public or admission to trading

2025-09-09

F.10 Publication date

2025-09-09

F.11 Any other services provided by the issuer

No such services are currently known to be provided by the issuer. However, it cannot be excluded that additional services exist or may be offered in the future outside the scope of Regulation (EU) 2023/1114.

F.12 Language or languages of the crypto-asset white paper

EN

F.13 Digital token identifier code used to uniquely identify the crypto-asset or each of the several crypto assets to which the white paper relates

KJVKZ3X3W

F.14 Functionally fungible group digital token identifier

BPLSKNPD9

F.15 Voluntary data flag

This white paper has been submitted on a mandatory basis under Regulation (EU) 2023/1114.

F.16 Personal data flag

Yes, this white paper contains personal data as defined in Regulation (EU) 2016/679 (the GDPR).

F.17 LEI eligibility

The issuer is eligible for a Legal Entity Identifier (LEI).

F.18 Home Member State

Germany

F.19 Host Member States

Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden

Part G – Information on the rights and obligations attached to the crypto-assets

G.1 Purchaser rights and obligations

The crypto-asset does not grant any legally enforceable or contractual rights or obligations to its holders or purchasers. Any functionalities accessible through the underlying technology are of a purely technical or operational nature and do not constitute rights comparable to ownership, profit participation, governance, or similar entitlements known from traditional financial instruments. Accordingly, holders do not acquire any legally enforceable claim against the issuer of the crypto-asset or any third party.

G.2 Exercise of rights and obligations

As the crypto-asset does not confer any legally enforceable rights or obligations, there are no applicable procedures or conditions for their exercise. Any interaction or functionality that may be available within the project's technical infrastructure – such as participation mechanisms or protocol-level features – serves operational purposes only and does not create, evidence, or constitute any contractual or statutory entitlement.

G.3 Conditions for modifications of rights and obligations

As the crypto-asset does not confer any legally enforceable rights or obligations, there are no conditions or mechanisms for modifying such rights or obligations. Adjustments to the technical protocol, smart contract logic, or related systems may occur in the ordinary course of development or maintenance. Such changes do not alter the legal position of holders, as no contractual rights exist and no rights arise under applicable law or regulation. Holders should not interpret technical updates or governance-related changes as amendments to legally binding entitlements.

G.4 Future public offers

Information on the future offers to the public of crypto-assets was not available at the time of writing this white paper (2026-07-27).

G.5 Issuer retained crypto-assets

Based on the publicly available information reviewed, no B3 tokens are considered to be retained by the Minerva Tech Foundation. Public documentation published by the B3 project describes the following token allocation:

- Community & Ecosystem: 34.2%
- Foundation: 22.5%
- Team & Advisors: 23.3%
- Investors: 20.0%

The Foundation allocation is described as supporting Player1 Foundation in connection with grants, partnerships, legal and compliance requirements, audits and other operational expenses. The Team & Advisors allocation is intended for core contributors and advisers. Together, these two allocations represent 45.8% of the total token supply.

Player1 Foundation, the team and the advisers are distinct from the issuer and their allocations are therefore not included in the number of crypto-assets retained by the issuer. Nevertheless, these recipients are materially connected with the implementation, operation or development of the B3 project. Their allocations may consequently create a concentration of economic or governance influence among project-associated persons.

The separate Community & Ecosystem allocation represents a further 34.2% of the total supply. Public documentation does not provide sufficient information to determine which persons ultimately control the relevant tokens or the decisions concerning their distribution. This allocation is not treated as issuer-retained, but its administration may also be relevant when assessing the overall concentration of influence within the project.

Address-level token balances can be viewed on-chain. A public address cannot necessarily be attributed to a single person or entity, and one person or entity may control multiple addresses. On-chain balances therefore do not, by themselves, establish beneficial ownership, affiliation or effective control. The vesting, unlocking, transfer or disposal of tokens held by significant project-associated participants could increase the circulating supply, affect governance outcomes or market liquidity and negatively affect holders of the B3 token.

G.6 Utility token classification

No – the crypto-asset project does not concern utility tokens as defined in Article 3(9) of Regulation (EU) 2023/1114.

G.7 Key features of goods/services of utility tokens

Not applicable, as the crypto-asset described herein is not a utility token.

G.8 Utility tokens redemption

Not applicable, as the crypto-asset described herein is not a utility token.

G.9 Non-trading request

The admission to trading is sought.

G.10 Crypto-assets purchase or sale modalities

Not applicable, as this white paper is written to seek admission to trading, not for the initial offer to the public.

G.11 Crypto-assets transfer restrictions

The crypto-assets themselves are not subject to any technical or contractual transfer restrictions and are generally freely transferable. However, crypto-asset service providers may impose restrictions on buyers or sellers in accordance with applicable laws, internal policies or contractual terms agreed with their clients.

G.12 Supply adjustment protocols

No – there are no fixed protocols that can increase or decrease the supply of the crypto-asset in response to changes in demand as of 2026-07-27.

However, it is possible to decrease the circulating supply by transferring crypto-assets to so-called "burn addresses". These are addresses from which the tokens are no longer intended to be transferred or accessed, effectively removing them from circulation.

G.13 Supply adjustment mechanisms

Not applicable.

G.14 Token value protection schemes

No – the crypto-asset does not have any mechanisms or schemes in place that aim to stabilise or protect its market value. Its value is determined solely by market supply and demand, and may be subject to significant volatility.

G.15 Token value protection schemes description

Not applicable, as the crypto-asset in scope does not have any value protection scheme in place.

G.16 Compensation schemes

No – the crypto-asset does not have any compensation scheme.

G.17 Compensation schemes description

Not applicable, as the crypto-asset in scope does not have any compensation scheme in place.

G.18 Applicable law

This white paper is submitted in the context of an application for admission to trading on a trading platform established in the European Union. Accordingly, this white paper shall be governed by the laws of the Federal Republic of Germany.

G.19 Competent court

Any disputes arising in relation to this white paper or the admission to trading may be brought before the competent courts in Hamburg, Germany.

Part H – information on the underlying technology

H.1 Distributed ledger technology (DLT)

The crypto-asset in scope is implemented on the Base network following the standards described below.

H.2 Protocols and technical standards

The crypto-asset that is the subject of this white paper is available on the Base network.

The following applies to Base:

Base is an Ethereum Layer-2 network introduced by Coinbase. Base launched in 2023 as an optimistic rollup based on Optimism's OP Stack. In February 2026, Base announced a phased migration towards a unified, Base-operated technology stack. Base does not operate a separate decentralised consensus mechanism or validator set comparable to a Layer-1 blockchain. Transaction ordering is currently performed by a centralised sequencer, while transaction data and state commitments are posted to Ethereum Layer-1. Ethereum provides the underlying data availability and settlement layer, and its Proof-of-Stake consensus secures the Layer-1 infrastructure on which Base relies. The integrity of Base's Layer-2 state is supported by an optimistic fault-proof mechanism, under which proposed state transitions may be challenged during the applicable challenge period. If the sequencer becomes unavailable, users may submit transactions through Ethereum Layer-1 to force inclusion, subject to the protocol's applicable delay mechanisms.

H.3 Technology used

The crypto-asset that is the subject of this white paper is available on the Base network.

The following applies to Base:

1. Base-compatible wallets: The tokens are supported by wallets compatible with the Ethereum Virtual Machine (EVM), including MetaMask, Coinbase Wallet and Trust Wallet. These wallets interact with Base in the same manner as with other EVM-compatible networks through standard Web3 interfaces.
2. Distributed ledger: Base operates as a Layer-2 network on Ethereum and maintains its own distributed ledger for recording token transactions. Transaction batches and corresponding state commitments are periodically posted to Ethereum Layer 1, allowing the Layer-2 state to be anchored to Ethereum and verified through the network's security mechanisms.
3. ERC-20 token standard: Base supports crypto-assets implemented using the ERC-20 token standard. As an EVM-compatible network, Base supports the same token interface standards commonly used on Ethereum.

4. Scalability and transaction efficiency: As an optimistic rollup Layer-2 network, Base executes transactions on the Layer-2 network and periodically posts transaction data and state commitments to Ethereum Layer 1. This architecture is intended to reduce the amount of data processed directly on Ethereum Layer 1 and may result in lower transaction costs compared to executing transactions directly on Ethereum Layer 1.

H.4 Consensus mechanism

The crypto-asset that is the subject of this white paper is available on the Base network.

The following applies to Base:

Base does not operate its own consensus mechanism or decentralised validator set comparable to a Layer-1 blockchain. As an optimistic rollup Layer-2 network, Base relies on Ethereum's Proof-of-Stake consensus for the finality and settlement of data and state commitments posted to Ethereum Layer 1. Transaction ordering on Base is performed by a sequencer, currently operated by Coinbase. This sequencing function provides transaction ordering and execution on the Layer-2 network but does not constitute a decentralised consensus mechanism. The validity of Layer-2 state transitions is supported by an optimistic fault-proof mechanism, under which incorrect state commitments may be challenged during the applicable dispute period. Accordingly, Base's security model depends on Ethereum Layer 1 for settlement and finality, while Layer-2 transaction ordering remains dependent on the sequencer.

H.5 Incentive mechanisms and applicable fees

The crypto-asset that is the subject of this white paper is available on the Base network.

The following applies to Base:

Base does not have a native protocol token and does not operate a staking, validator reward or token issuance mechanism. Transaction fees on Base are paid in ETH. The economic incentives within the network are primarily related to transaction processing and network security. Transactions are executed on Base and periodically submitted to Ethereum Layer 1 in batches. As the cost of a Layer-1 submission is shared among multiple Layer-2 transactions, the average transaction cost per transaction may be lower than executing the same transactions directly on Ethereum Layer 1. The integrity of withdrawals from Base is supported by a fault-proof mechanism. Withdrawals are subject to a dispute period during which participants may challenge incorrect state commitments. The dispute process incorporates economic incentives intended to encourage honest behaviour and discourage invalid claims.

H.6 Use of distributed ledger technology

No – DLT is not operated by the issuer, the offeror, the person seeking admission to trading, or any third party acting on their behalf.

H.7 DLT functionality description

Not applicable, as the DLT is not operated by the issuer, the offeror, the person seeking admission to trading, or any third party acting on their behalf.

H.8 Audit

Given the breadth of the term “technology”, it cannot be confirmed that all elements or aspects of the technology employed have undergone a comprehensive and systematic technical examination. Accordingly, no comprehensive audit of the technology used can be confirmed. This white paper focuses primarily on risk-related aspects and therefore does not imply, nor should it be interpreted as implying, that a full assessment or audit of all technological elements has been conducted.

H.9 Audit outcome

Not applicable, as no comprehensive audit of the technology used has been conducted or can be confirmed.

Part I – Information on risks

I.1 Offer-related risks

1. Regulatory and Compliance

Regulatory frameworks applicable to crypto-asset services in the European Union and in third countries are evolving. Supervisory authorities may introduce, interpret, or enforce rules that affect (i) the eligibility of this crypto-asset for admission to trading, (ii) the conditions under which a crypto-asset service provider may offer trading, custody, or transfer services for it, or (iii) the persons or jurisdictions to which such services may be provided. As a result, the crypto-asset service provider admitting this crypto-asset to trading may be required to suspend, restrict, or terminate trading or withdrawals for regulatory reasons, even if the crypto-asset itself continues to function on its underlying network.

2. Trading venue and connection risk

Trading in the crypto-asset depends on the uninterrupted operation of the trading venues on which it is listed and, where applicable, on its technical connections to external liquidity sources or venues. Interruptions such as system downtime, maintenance, faulty integrations, API changes, or failures at an external venue can temporarily prevent order placement, execution, deposits, or withdrawals, even when the underlying blockchain is functioning. In addition, trading platforms in emerging markets may operate under differing governance, compliance, and oversight standards, which can increase the risk of operational failures or disorderly market conditions.

3. Market formation and liquidity conditions

The price and tradability of the crypto-asset depend on actual trading activity on the venues to which the service provider is connected, whether centralised exchanges (CEXs) or decentralised exchanges (DEXs). Trading volumes may at times be low, order books thin, or liquidity concentrated on a single venue. In such conditions, buy or sell orders may not be executed in full or may be executed only at a less favourable price, resulting in slippage.

Volatility: The market price of the crypto-asset may fluctuate significantly over short periods, including for reasons that are not linked to changes in the underlying project or protocol. Periods of limited liquidity, shifts in overall market sentiment, or trading on only a small number of CEXs or DEXs can amplify these movements and lead to higher slippage when orders are executed. As a result, investors may be unable to sell the crypto-asset at or close to a previously observed price, even where no negative project-specific event has occurred.

4. Counterparty and service provider dependence

The admission of the crypto-asset to trading may rely on several external parties, such as connected centralised or decentralised trading venues, liquidity providers, brokers, custodians, or technical integrators. If any of these counterparties fail to perform, suspend their services, or apply internal restrictions, the trading, deposit, or withdrawal of the crypto-asset on the listing crypto-asset service provider can be interrupted or halted.

Quality of counterparties: Trading venues and service providers in certain jurisdictions may operate under regulatory or supervisory standards that are lower or differently enforced than those applicable in the European Union. In such environments, deficiencies in governance, risk management, or compliance may remain undetected, which increases the probability of abrupt service interruptions, investigations, or forced wind-downs.

Delisting and service suspension: The crypto-asset's availability may depend on the internal listing decisions of these counterparties. A delisting or suspension on a key connected venue can materially reduce liquidity or make trading temporarily impossible on the admitting service provider, even if the underlying crypto-asset continues to function.

Insolvency of counterparties: If a counterparty involved in holding, routing, or settling the crypto-asset becomes insolvent, enters restructuring, or is otherwise subject to resolution measures, assets held or processed by that counterparty may be frozen, become temporarily unavailable, or be recoverable only in part or not at all, which can result in losses for clients whose positions were maintained through that counterparty. This risk applies in particular where client assets are held on an omnibus basis or where segregation is not fully recognised in the counterparty's jurisdiction.

5. Operational and information risks

Due to the irrevocability of blockchain transactions, incorrect transaction approvals or the use of wrong networks or addresses will typically make the transferred funds irrecoverable. Because trading may also rely on technical connections to other venues or service providers, downtime or faulty code in these connections can temporarily block trading, deposits, or withdrawals even when the underlying blockchain is functioning. In addition, different groups of market participants may have unequal access to technical, governance, or project-related information, which can lead to information asymmetry and place less informed investors at a disadvantage when making trading decisions.

6. Market access and liquidity concentration risk

If the crypto-asset is only available on a limited number of trading platforms or through a single market-making entity, this may result in reduced liquidity, greater price volatility, or periods of inaccessibility for retail holders.

I.2 Issuer-related risks

1. Insolvency of the issuer

As with any commercial entity, the issuer may face insolvency risks. These may result from insufficient funding, low market interest, mismanagement, or external shocks (e.g. pandemics, armed conflicts). In such a case, ongoing development, support, and governance of the project may cease, potentially affecting the viability and tradability of the crypto-asset.

2. Legal and regulatory risks

The issuer operates in a dynamic and evolving regulatory environment. Failure to comply with applicable laws or regulations in relevant jurisdictions may result in enforcement actions, penalties, or restrictions on the project's operations. These may negatively impact the crypto-asset's availability, market acceptance, or legal status.

3. Operational risks

The issuer may fail to implement adequate internal controls, risk management, or governance processes. This can result in operational disruptions, financial losses, delays in updating the white paper, or reputational damage.

4. Governance and decision-making

The issuer's management body is responsible for key strategic, operational, and disclosure decisions. Ineffective governance, delays in decision-making, or lack of resources may compromise the stability of the project and its compliance with MiCA requirements. High concentration of decision-making authority or changes in ownership/control can amplify these risks.

5. Reputational risks

The issuer's reputation may be harmed by internal failures, external accusations, or association with illicit activity. Negative publicity can reduce trust in the issuer and impact the perceived legitimacy or value of the crypto-asset.

6. Counterparty dependence

The issuer may depend on third-party providers for certain core functions, such as technology development, marketing, legal advice, or infrastructure. If these partners discontinue their services, change ownership, or underperform, the issuer's ability to operate the project or maintain investor

communication may be impaired. This could disrupt project continuity or undermine market confidence, ultimately affecting the crypto-asset's value.

I.3 Crypto-assets-related risks

1. Valuation risk

The crypto-asset does not represent a claim, nor is it backed by physical assets or legal entitlements. Its market value is driven solely by supply and demand dynamics and may fluctuate significantly. In the absence of fundamental value anchors, such assets can lose their entire market value within a very short time. Historical market behaviour has shown that some types of crypto-assets have become worthless. Investors should be aware that this crypto-asset may lose all of its value.

2. Market volatility risk

Crypto-asset prices can fluctuate sharply due to changes in market sentiment, macroeconomic conditions, regulatory developments, or technology trends. Such volatility may result in rapid and significant losses. Holders should be prepared for the possibility of losing the full amount invested.

3. Liquidity and price-determination risk

Low trading volumes, fragmented trading across venues, or the absence of active market makers can restrict the ability to buy or sell the crypto-asset. In such situations, it is not guaranteed that an observable market price will exist at all times. Spreads may widen materially, and orders may only be executable under unfavourable conditions, which can make liquidation costly or temporarily impossible.

4. Crypto-asset security risk

Loss or theft of private keys, unauthorised access to wallets, or failures of custodial or exchange service providers can result in the irreversible loss of assets. Because blockchain transactions are final, recovery of funds after a compromise is generally impossible.

5. Fraud and scam risk

The pseudonymous and irreversible nature of blockchain transactions can attract fraudulent schemes. Typical forms include fake or unauthorised crypto-assets imitating established ones, phishing attempts, deceptive airdrops, or social-engineering attacks. Investors should exercise caution and verify the authenticity of counterparties and information sources.

6. Legal and regulatory reclassification risk

Legislative or regulatory changes in the European Union or in the Member State where the crypto-asset is admitted to trading may alter its legal classification, permitted uses, or tradability. In third

countries, the crypto-asset may be treated as a financial instrument or security, which can restrict its offering, trading, or custody.

7. Absence of investor protection

The crypto-asset is not covered by investor-compensation or deposit-guarantee schemes. In the event of loss, fraud, or insolvency of a service provider, holders may have no access to recourse mechanisms typically available in regulated financial markets.

8. Counterparty risk

Reliance on third-party exchanges, custodians, or intermediaries exposes holders to operational failures, insolvency, or fraud of these parties. Investors should conduct due diligence on service providers, as their failure may lead to the partial or total loss of held assets.

9. Reputational risk

Negative publicity related to security incidents, misuse of blockchain technology, or associations with illicit activity can damage public confidence and reduce the crypto-asset's market value.

10. Community and sentiment risk

Because the crypto-asset's perceived relevance and expected future use depend largely on community engagement and the prevailing sentiment, a loss of public interest, negative coverage or reduced activity of key contributors can materially reduce market demand.

11. Macroeconomic and interest-rate risk

Fluctuations in interest rates, exchange rates, general market conditions, or overall market volatility can influence investor sentiment towards digital assets and affect the crypto-asset's market value.

12. Taxation risk

Tax treatment varies across jurisdictions. Holders are individually responsible for complying with all applicable tax laws, including the reporting and payment of taxes arising from the acquisition, holding, or disposal of the crypto-asset.

13. Anti-money-laundering and counter-terrorist financing risk

Wallet addresses or transactions connected to the crypto-asset may be linked to sanctioned or illicit activity. Regulatory responses to such findings may include transfer restrictions, reporting obligations, or the freezing of assets on certain venues.

14. Market-abuse risk

Due to limited oversight and transparency, crypto-assets may be vulnerable to market-abuse practices such as spoofing, pump-and-dump schemes, or insider trading. Such activities can distort prices and expose holders to sudden losses.

15. Legal ownership and jurisdictional risk

Depending on the applicable law, holders of the crypto-asset may not have enforceable ownership rights or effective legal remedies in cases of disputes, fraud, or service failure. In certain jurisdictions, access to exchanges or interfaces may be restricted by regulatory measures, even if on-chain transfer remains technically possible.

16. Concentration risk

A large proportion of the total supply may be held by a small number of holders. This can enable market manipulation, governance dominance, or sudden large-scale liquidations that adversely affect market stability, price levels, and investor confidence.

I.4 Project implementation-related risks

As this white paper relates to admission to trading of the crypto-asset, the risk description below reflects general implementation risks typically associated with crypto-asset projects and relevant for the crypto-asset service provider. The party admitting the crypto-asset to trading is not involved in the project's implementation and does not assume responsibility for its governance, funding, or execution.

Delays, failures, or changes in the implementation of the project as outlined in its public roadmap or technical documentation may negatively impact the perceived credibility or usability of the crypto-asset. This includes risks related to project governance, resource allocation, technical delivery, and team continuity.

Key-person risk: The project may rely on a limited number of individuals for development, maintenance, or strategic direction. The departure, incapacity, or misalignment of these individuals may delay or derail the implementation.

Timeline and milestone risk: Project milestones may not be met as announced. Delays in feature releases, protocol upgrades, or external integrations can undermine market confidence and affect the adoption, use, or value of the crypto-asset.

Delivery risk: Even if implemented on time, certain functionalities or integrations may not perform as intended or may be scaled back during execution, limiting the crypto-asset's practical utility.

I.5 Technology-related risks

As this white paper relates to admission to trading of the crypto-asset, the following risks concern the underlying distributed ledger technology (DLT), its supporting infrastructure, and related

technical dependencies. Failures or vulnerabilities in these systems may affect the availability, integrity, or transferability of the crypto-asset.

1. Blockchain dependency risk

The functionality of the crypto-asset depends on the continuous and stable operation of the blockchain(s) on which it is issued. Network congestion, outages, or protocol errors may temporarily or permanently disrupt on-chain transactions. Extended downtime or degradation in network performance can affect trading, settlement, or the usability of the crypto-asset.

2. Smart contract vulnerability risk

The smart contract that defines the crypto-asset's parameters or governs its transfers may contain coding errors or security vulnerabilities. Exploitation of such weaknesses can result in unintended token minting, permanent loss of funds, or disruption of token functionality. Even after external audits, undetected vulnerabilities may persist due to the immutable nature of deployed code.

3. Wallet and key-management risk

The custody of crypto-assets relies on secure private key management. Loss, theft, or compromise of private keys results in irreversible loss of access. Custodians, trading venues, or wallet providers may be targeted by cyberattacks. Compatibility issues between wallet software and changes to the blockchain protocol (e.g. network upgrades) can further limit user access or the ability to transfer the crypto-asset.

Outdated or vulnerable wallet software:

Users relying on outdated, unaudited, or unsupported wallet software may face compatibility issues, security vulnerabilities, or failures when interacting with the blockchain. Failure to update wallet software in line with protocol developments can result in transaction errors, loss of access, or exposure to known exploits.

4. Network security risks

Attack risks: Blockchains may be subject to denial-of-service (DoS) attacks, 51% attacks, or other exploits targeting the consensus mechanism. These can delay transactions, compromise finality, or disrupt the accurate recording of transfers.

Centralisation concerns: Despite claims of decentralisation, a relatively small number of validators or a high concentration of stake may increase the risk of collusion, censorship, or coordinated network downtime, which can affect the resilience and operational reliability of the crypto-asset.

5. Bridge and interoperability risk

Where tokens can be bridged or wrapped across multiple blockchains, vulnerabilities in bridge protocols, validator sets, or locking mechanisms may result in loss, duplication, or misrepresentation of assets. Exploits or technical failures in these systems can instantly impact circulating supply, ownership claims, or token fungibility across chains.

6. Forking and protocol-upgrade risk

Network upgrades or disagreements among node operators or validators can result in blockchain “forks”, where the blockchain splits into two or more incompatible versions that continue separately from a shared past. This may lead to duplicate token representations or incompatibilities between exchanges and wallets. Until consensus stabilises, trading or transfers may be disrupted or misaligned. Such situations may be difficult for retail holders to navigate, particularly when trading platforms or wallets display inconsistent token information.

7. Economic-layer and abstraction risk

Mechanisms such as gas relayers, wrapped tokens, or synthetic representations may alter the transaction economics of the underlying token. Changes in transaction costs, token demand, or utility may reduce its usage and weaken both its economic function and perceived value within its ecosystem.

8. Spam and network-efficiency risk

High volumes of low-value (“dust”) or automated transactions may congest the network, slow validation times, inflate ledger size, and raise transaction costs. This can impair performance, reduce throughput, and expose address patterns to analysis, thereby reducing network efficiency and privacy.

9. Front-end and access-interface risk

If users rely on centralised web interfaces or hosted wallets to interact with the blockchain, service outages, malicious compromises, or domain expiries affecting these interfaces may block access to the crypto-asset, even while the blockchain itself remains fully functional. Dependence on single web portals introduces a critical point of failure outside the DLT layer.

10. Decentralisation claim risk

While the technical infrastructure may appear distributed, the actual governance or economic control of the project may lie with a small set of actors. This disconnect between marketing claims and structural reality can lead to regulatory scrutiny, reputational damage, or legal uncertainty – especially if the project is presented as ‘community-governed’ without substantiation.

I.6 Mitigation measures

None.

Part J – Information on the sustainability indicators in relation to adverse impact on the climate and other environment-related adverse impacts

J.1 Adverse impacts on climate and other environment-related adverse impacts

S.1 Name

Crypto Risk Metrics GmbH

S.2 Relevant legal entity identifier

39120077M9TG001FE242

S.3 Name of the crypto-asset

B3

S.4 Consensus Mechanism

The crypto-asset that is the subject of this white paper is available on the Base network.

The following applies to Base:

Base does not operate its own consensus mechanism or decentralised validator set comparable to a Layer-1 blockchain. As an optimistic rollup Layer-2 network, Base relies on Ethereum's Proof-of-Stake consensus for the finality and settlement of data and state commitments posted to Ethereum Layer 1. Transaction ordering on Base is performed by a sequencer, currently operated by Coinbase. This sequencing function provides transaction ordering and execution on the Layer-2 network but does not constitute a decentralised consensus mechanism. The validity of Layer-2 state transitions is supported by an optimistic fault-proof mechanism, under which incorrect state commitments may be challenged during the applicable dispute period. Accordingly, Base's security model depends on Ethereum Layer 1 for settlement and finality, while Layer-2 transaction ordering remains dependent on the sequencer.

S.5 Incentive Mechanisms and Applicable Fees

The crypto-asset that is the subject of this white paper is available on the Base network.

The following applies to Base:

Base does not have a native protocol token and does not operate a staking, validator reward or token issuance mechanism. Transaction fees on Base are paid in ETH. The economic incentives within the network are primarily related to transaction processing and network security. Transactions are executed on Base and periodically submitted to Ethereum Layer 1 in batches. As the cost of a Layer-1 submission is shared among multiple Layer-2 transactions, the average transaction cost per transaction may be lower than executing the same transactions directly on Ethereum Layer 1. The integrity of withdrawals from Base is supported by a fault-proof mechanism. Withdrawals are subject to a dispute period during which participants may challenge incorrect state commitments. The dispute process incorporates economic incentives intended to encourage honest behaviour and discourage invalid claims.

S.6 Beginning of the period to which the disclosure relates

2024-08-12

S.7 End of the period to which the disclosure relates

2025-08-12

S.8 Energy consumption

23.02053 kWh/a

S.9 Energy consumption sources and methodologies

The energy consumption of this asset is aggregated across multiple components. To determine the energy consumption of the token, the energy consumption of the Base network is calculated first. A fraction of the network's energy consumption is then attributed to the token based on the activity of the crypto-asset within the network. When calculating the energy consumption, the Functionally Fungible Group Digital Token Identifier (FFG DTI) is used, if available, to determine all implementations of the asset in scope. The mappings are updated regularly based on data from the Digital Token Identifier Foundation. The information regarding the hardware used and the number of participants in the network is based on assumptions that are verified on a best-effort basis using empirical data. In general, participants are assumed to act largely in an economically rational manner. As a precautionary principle, conservative assumptions are made in cases of doubt, resulting in higher estimates of the adverse impacts.

S.10 Renewable energy consumption

37.9124101186 %

S.11 Energy intensity

0.00000 kWh

S.12 Scope 1 DLT GHG emissions – Controlled

0.00000 tCO₂e/a

S.13 Scope 2 DLT GHG emissions – Purchased

0.00766 tCO₂e/a

S.14 GHG intensity

0.00000 kgCO₂e

S.15 Key energy sources and methodologies

To determine the proportion of renewable energy usage, the locations of the nodes are determined using public information sites, open-source and in-house-developed crawlers. Where no information is available on the geographic distribution of nodes, comparable reference networks are used, taking into account similarities in incentivisation structure and consensus mechanism. This geographic information is then combined with publicly available data from Our World in Data. The resulting intensity is calculated as the marginal energy consumption with respect to one additional transaction.

Ember (2025); Energy Institute, Statistical Review of World Energy (2024), with major processing by Our World in Data. "Share of electricity generated by renewables - Ember and Energy Institute" [dataset].
